

## ♥ Water, Precious Water ♥

Calvin F. Bey

Water! Perhaps the most common and the least understood compound in the world. Its more than just a molecule with an oxygen and two hydrogen atoms. Much more. We take water for granted, until we discover that it is either scarce or toxic. We fear we won't have enough in times of drought, and we fear how the chlorine and fluoride are toxic in our bodies. Good water is a precious commodity.

As an avid organic gardener, I have used water frequently to keep my plants productive. Watering the plants was especially critical during the heat and drought in the summers of 2011 and 2012. I tried to apply water appropriately, being sure to not use more than is needed by the plant. In the process, I have often wondered how the plant was feeling about my watering regime. Too much? Too little? Bad quality?

With emphasis on growing nutrient dense vegetables, I take pride in striving to follow the Laws of Nature. I avoid harsh chemical pesticides and chemical fertilizers and I have used filters to reduce chlorine when watering. Yet I have wondered about the effectiveness of my watering regime.

Years ago I learned about some unusual water energy properties of water. I read *Living Water* by Olof Alexandersson, the story of Viktor Schauberger and the Secrets of Natural Energy, and *The Hidden Messages in Water* by Masaru Emote. Both books caused me to think more about water quality, but I did not change the way I was watering my plants. I often lamented, "if I could only live next to a river, then I could pump better water on my garden." Really, I yearned for a mountain stream with water pure and clean.

Regarding drinking water, I never felt like I had the answer as to what water is best. There are choices -- carbon filters, chlorine filters, reverse osmosis, high pH (ionized) water, subtle energy-enhanced, or even distilled water. So the calendar turns to 2013, and I am no further along, and I am not even trying to figure out which water is best. Then the phone rings and I am re-introduced to **structured water**.

Old researchers are born-skeptics, so like many things I wanted proof that this structured water had useful properties. For a couple weeks, in my spare time, I immersed myself in studying what was known and proven about this structured water. The proof for me is in the application, so when I saw positive field results, by folks with no vested interest, I knew I had to give it a try.

## ♥ Water, Precious Water ♥

I encourage you to go to [www.NaturalActionTechnologies.com](http://www.NaturalActionTechnologies.com) for information on structured water. See the videos, read the testimonials, and try to understand what this is all about. Some folks have asked me to explain how it works, so they can then try it. With a little knowledge about chemistry, and the concepts of coherence, water tension, and bio-photon life force energy, the structuring can be generally explained. Structured water is certainly not toxic and evidence shows that it works--for people and for plants.

Go on the site shown above to get all the benefits of structured water for people, animals, and even how it is beneficial for your household plumbing system. I will have more personal information on all that when we get our whole house unit in early April.

Because of the verified results of structured water for increasing plant growth, I started there with a small demonstration. Basically, I simply wanted to see for myself if there were differences between the structured, Natural Action Water and my city tap water. I have been very encouraged, so much that I will be using Natural Action Water (structured water) on my entire garden this year. Here in Northwest Arkansas we are now involved with establishing our spring gardens. On this web site, I will keep you updated as to garden progress, and information regarding the water.

See the photos on the next two pages and decide for yourself. Imagine if you increased yield by 20 percent and reduced water needs by 20 percent. It is easy for me to justify a garden unit. And with nutrient dense produce, what a bonus.

I don't sell these devices, but simply refer you to a Authorized Distributor in Arizona. Victoria White welcomes phone calls and emails and will be very helpful with any questions. Of course you can contact me also. Contact for Victoria White is:

## ♥ Water, Precious Water ♥

*(VICTORIA'S NOTE: Keep in mind that Calvin only did the test on these plants – one of each. He did not hand pick a NAT watered plant among a bunch of similar plants, or a control among a bunch of controls. What you see is what he got)*

Rooted tomato cuttings from same mother plant, comparing Natural Action Water (structured) vs. tap water (control). Results shown on right after 20 days.

Red cabbage, comparing structured vs. tap water. Results after 17 days.

♥ Water, Precious Water ♥

Flat Dutch cabbage, comparing structured vs. tap water. Results after 17 days.

Broccoli, comparing structured vs. tap water. Results after 17 days.
