

Natural Action Technologies

*A global leader in structured water technology and distribution*

PRODUCT CATALOGUE

## Our Structured Water Units

Designed to mimic nature through motion and materials, our premium quality Structured Water Units are manufactured to a very high standard and undergo rigorous quality control. The unique and innovative design utilizes a specific flow form geometry to establish a balanced vortex motion within the water, returning vital properties. Our Structured Water Units can be used in portable, residential, and commercial applications. Our devices are sustainable, affordable, compact, easy to use and simple to install.

*All units require no ongoing maintenance or power to run PLUS include a 90-day Product Satisfaction Guarantee and 10-year Warranty against manufacturer defects (from date of purchase).*

### *Cleaning*

Normal inline operation will continuously clean all Natural Action Technology Water Units. If desired, portable units (and those easily disconnected) can be soaked in a bath of water and apple cider vinegar and bicarbonate of soda or hot tap water or run through the dishwasher.

### *Storing*

The compact products can be drained and stored in either direction, i.e., spout up or spout down, or sideways once dry.

### *Installation*

Using a licensed and bonded plumber is recommended to install Whole House, Commercial and Stainless Steel Units.

## Benefits

Structured Water contains more available **oxygen**, increased **hydration** and supports **enhanced nutrient absorption**. It helps to order and **incapsulate unwanted compounds, radicals and other elements** while delivering **increased bioenergetic properties**.

Not only can water be simply and effectively re-ordered in its chemical and group structure to an advantageous degree, but so can many elements and compounds within the water. The etching and hard accumulation of calcium and other substances responsible for the majority of degradation in many residential and commercial applications is drastically reduced. This allows for reduced downtime and maintenance costs, as well as providing higher quality work from the water in any given application. Heat exchangers, water heaters, boilers, valves, tanks and other system components experience increased thermal efficiency, reduced pressure loss and overall reduce power usage.

## Our Difference

- ✓ Made in the USA
- ✓ Very high standard of manufacture and quality control
- ✓ 10-year Warranty against manufacturer defects
- ✓ 90-day Product Satisfaction Guarantee
- ✓ No maintenance or power required
- ✓ Easy to install
- ✓ Wide range of products including portable, residential and commercial
- ✓ Fast shipping all over the world
- ✓ World class customer service and support for our customers and network
